

■ LUXION Coffee OS

■ What this is

Coffee is not inconsistent by chance.

It becomes inconsistent because one dominant variable breaks it.

This system identifies that variable and tells you what to fix.

■ Problem

Even with the same beans and recipe:

- Taste changes
- Bitterness fluctuates
- Extraction becomes unstable

Most people adjust everything.

That is the mistake.

■ Insight

You don't have multiple problems.

You have one dominant problem.

■ Input

We observe only 5 elements:

- Grind
 - Temperature
 - Time
 - Water
 - Human consistency
-

■ Output

The system returns only one thing:

👉 **The most impactful variable**

Example:

BLOCK: Temperature

ACTION: Increase +2°C

■ How it works

Instead of averaging variables,

this system focuses on:

the variable that affects the outcome the most

Fix that → consistency improves

■ Why it matters

Baristas don't fail by taste.

They fail by inconsistency.

■ Example

Input:
Grind: OK
Temperature: Low
Time: OK
Water: OK
Human: Stable

Result:
BLOCK: Temperature
ACTION: +2°C

■ Philosophy

Better coffee is not about skill.

It is about removing the dominant error.

■ Note

This is a simplified model.
